DETAILED ACTION

Response to Amendment

Claims 36-64 and 72 are pending.

In view of the amendment, filed on December 18th, 2006 following rejections are maintained for the reasons of record as given in the previous office action, mailed on August 17th, 2006.

- ✓ Rejection of claims 36-38,44,47,51-53,56,58-59,62,and 65 under 35 U.S.C. 102 (b) as being anticipated by Courval et al. (U S Patent No. 5,204,045).
- ✓ Rejection of claims 36,38,40,42,47, and 51-55 under 35 U.S.C. 102 (b) as being anticipated by Bentivoglio et al. (U S Patent No. 4,830,545).
- ✓ Rejection of claims 36,38-42,44-55,57,59-65,and 72 under 35 U.S.C. 102 (b) as being anticipated by Dudley (U S Patent No. 4,123,207).

In view of the amendment, filed on December 18th, 2006 following rejection is withdrawn from the previous office action, mailed on August 17th, 2006.

- ✓ Rejection of claim 72 under 35 U.S.C. 112, second paragraph, for being indefinite.

Response to Arguments

Applicant's arguments filed December 18th, 2006 have been fully considered but they are not persuasive.

Applicant argues that the prior art, Courval et al. (U S Patent No. 5,204,045) does not disclose or suggest a heater to increase the temperature of an already molten material. He further argues that the prior art would not have recognized any need for higher temperature as only the melt temperature at the die exit need be reached.

This is not found persuasive because the prior art, Courval ('045) discloses the heater near by the die plate. It further discloses the temperature range of the molten material, which is about 30 C to 145 C. It further teaches that the temperature range of the molten polymer is depending on the polymer shape as a result of deformation force upon it (See col.5 lines 9-43, and example 2).

Applicant further argues that the prior art, Bentivoglio et al. (U S Patent No. 4,830,545) does not disclose at all any temperature range of the material and also a heater to increase the resin temperature above the melting temperature.

This is not found persuasive because the prior art, Bentivoglio ('545) discloses the heater to increase the temperature of the material and also to keep the temperature even, in which the throughout can be achieved before the melt fracture starts to occur is thereby increased the temperature of the material (See col.3 lines 9-27).

Applicant further argues that the prior art, Dudley (U S Patent No. 4,123,207) does not disclose the heater for increasing the temperature of the resin at the die exit.

This is not found persuasive because the prior art, Dudley ('207) discloses the heat exchanger as a heater for increasing temperature of material to prevent the solidification of the molten material prior to exit from the member (See col.7 lines 10-22).

Therefore, the rejection of claims under 102(b) is maintained for the reasons of record.

Conclusion

THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
